## NON-FINAL REJECTION

### *Response to Applicant's Amendment*

#### *Claim Rejections*

#### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-12 are rejected under 35 USC102 (e) as being anticipated by Fukui (US 6,157,242).

Figure 1A of Fukui discloses a charge pump circuit comprising a first set of stages (stg1-stg) and a later set of stages (stg5-stg8), a first clock signal (CLK2-CLK4) and a second clock signal (BSTCK1-BSTCLK3) providing by a level shifter (10).

### *Response to Applicant's Arguments*

The applicant argues that Fukui does not disclose a second clock which is provided by a voltage booster which has significant structural and functional distinction between a level shifter

Art Unit: 2816

and a voltage booster. The argument is not persuasive because there is nothing stated in the rejected claims about the structure of the level shifter. The voltage booster of Fukui is considered to be the level shifter because it shifts the voltages of the clocks (CLK1-CLK3) as shown in Figures 4A-4D to the boosted voltages as shown in Figure 5. Thus, the recitation "level shifter" in claims 1 and 12 is anticipated by the boost circuit (10) of Fukui.

***Conclusion***
